ABOUT US

PT Solid Aroma Mandiri is an Indonesian processor, supplier, and exporter of high-quality green coffee beans. We supply premium **Robusta** and **Arabica** coffee from renowned coffee-producing regions across Indonesia, supported by our local supply network to serve both domestic and international markets. With a strong focus on quality, consistency, and reliability, we provide professional coffee solutions for importers, roasters, distributors, and local buyers.

Our commitment is to build long-term relationships with our customers by providing transparency, consistency, and dependable supply solutions. We strive to become a trusted bridge between Indonesia's coffee producers and global coffee markets, while also supporting local demand through our domestic supply network.

OUR GLOBAL COFFEE MARKET

Our company has built strong and lasting relationships with international markets. We have been exporting primarily to **Egypt, Belgium, Dutch , Japan and United State.**

By focusing on these key markets, we've gained valuable insights into consumer preferences, industry trends, and the logistics required to deliver our products efficiently and effectively.

OUR PRODUCT AND RESOURCES

At Solid Aroma Mandiri, we are committed to providing various grades of green coffee beans for our customers. To ensure that we meet the highest standards, we carefully source our green coffee beans from three key regions in Indonesia: **Aceh, Sumatra Utara, Lampung, Jawa Tengah, Jawa Timur, and Nusa Tenggara Timur.** By sourcing from these three regions, we are able to offer the best green coffee beans for export, ensuring freshness, and superior quality. Our strategic partnerships with local farmers, combined with efficient shipping through major ports, allow us to consistently meet the demands of our international markets.

COFFEE PROCESSING METHODS

Dry Process (Natural)

Coffee cherries are dried under the sun with the fruit intact before the beans are removed. This method typically produces coffees with a fuller body, higher sweetness, and rich fruity notes.

Wet Process (Washed)

The coffee fruit is removed before drying, and the beans are thoroughly washed during processing. This method creates a cleaner cup profile with bright acidity, clarity, and consistent flavor characteristics.

Honey Process

Part of the coffee fruit's mucilage is left on the bean during drying. This method offers a balance between Natural and Washed coffees, resulting in enhanced sweetness, smooth body, and complex flavor profiles.

Quality Control

Raw beans selection

Defect sorting

Moisture checking

Density evaluation

Packaging inspection

Pre-shipment quality verification
